Koning Willem III. Emissie 1872 - 1888.

Tandingen.

G. 5, 10, 12½, 15, 20, 25, 50 ct.

K. 5, 10, 12½, 15, 20, 25 en 50 ct.

L. 5, 10, 12½, 15, 20, 22½, 25 en 50 ct.

G. gedecentreerd geperforeerd.

Lijntanding, zegel 2 slagen te breed.

Zegel met daklijst.

Onzorgvuldige handelingen tijdens het perforeren.

Indien de holle perforatiepennen bot werden, bleven papierrestjes (resten van de confetti) in de gaatjes achter (vaak evenzo bij zacht/slap papier). De pennen werden of bijgeslepen of vervangen. Ook de doorsteekgaatjes in de onderplaat waren aan slijtage onderhevig en zo kon een onregelmatige perforatielijn ontstaan. Bij het perforeren gold ook "Vakmanschap is Meesterschap".

10 cent rood, tanding Hc.

Naast de nieuwe zegels van 7½, 22½ ct en de 1.00 G, werden alle waarden (behalve de 2.50 G) eveneens met kam Hc geperforeerd.

VARIETIES OF PAPER.

The issues of 1872 to 1888 were printed on Wove paper varying considerably in thickness and texture. The texture variations range from the slightly mottled appearance of ordinary wove paper to a pronounced "mesh" which appears either vertical or horizontal according to the direction in which the sheet was placed in the printing machine. This variation of texture applies to all the varying thicknesses incidental to the production of these papers. In weight the paper varies from a thin fairly transparent, somewhat hard grade to a grade which is thick soft and absorbent. All the above varieties were printed typographically by the engravers Messrs J. Enschedé & Sons of Haarlem.
